

# Asset

Key Benefits

Increase up time

Decrease life time cost

**Asset Management**

**Asset Utilization**

**Asset Safety**

# ASSET MANAGEMENT

## Take control of your assets. Spend more time with your patients.

Count assets quickly and systematically without requiring a line of sight.

Identify which assets are lost or relocated.

Reduce asset searching time from hours to minutes.

Maintain paperless custody.

Easily schedule preventative maintenance and create automated workflows.

Count all your assets in the quickest, most accurate way and simultaneously receive an up-to-date asset inventory list. Track your maintenance and calibration process automatically. Increase asset efficiency, decrease operational costs, and eliminate over-purchase.

## ASSET UTILIZATION

Identify which assets are idle and which assets are used the most.

Re-allocate assets to where they are in most demand and avoid unnecessary purchases and rentals.

Find any assets in a matter of seconds.

Ensure that the required assets are in their pre-designated area and are available for patient care.

# Highest return from mobile assets.

An average asset in a hospital remains unutilized for more than 50% of its lifespan. Identify how long your assets are being used in which location. Intelligently locate and manage assets according to demand. Maximize efficiency.

## ASSET SAFETY

# Ensure your assets are in your facility. At all times.

Do you often lose your infusion pump, pillows, towels, oximeters, and more?

Prevent asset loss by receiving real-time alerts in case of any theft attempt or unauthorized change of location.

Set safe zones for your assets and automatically detect unauthorized asset movement through real-time location information.

See the video of the risk moment through CCTV integration.
